

PROJECT FACT SHEET

November 2014

OVERVIEW

This purpose of this study is to identify and develop viable, multimodal and cost-effective short- and long-term transportation improvements that will improve the efficiency, operations and safety of the SR 141/Medlock Bridge Road corridor.

The study's recommendations will be based on the following criteria:

- Consistency with the City's transportation vision and goals
- Addresses public concerns
- Potential to address the existing and future mobility needs of the corridor
- Sensitive to current and future land use
- Provides better access and circulation within and between major intersections

STUDY AREA

The study will examine SR 141/Medlock Bridge Road from just south of the Johns Creek city limits where it crosses the Chattahoochee River north to SR 120/Abbotts Bridge Road.

PROJECT FACT SHEET

November 2014

BACKGROUND

The City of Johns Creek's Transportation Master Plan, Comprehensive Plan 2030 and the North Fulton Comprehensive Transportation Plan all identify the importance of and transportation challenges present along the Medlock Bridge Road corridor.

The study was originally focused on the area of Medlock Bridge Road between Old Alabama Road and State Bridge road to examine the feasibility of a new multimodal connection. Based on traffic analysis and public input, that new connection was found to not have a significant impact on congestion or be in the best interest of the public. Therefore, the study was rescoped to examine the broader Medlock Bridge Road corridor for possible improvements.
